Street Lighting Services and Styles

Services and Charges

MVEC will design, install and maintain the pole, wiring, transformation and fixture as required. All equipment remains the property of MVEC. The member will be charged based on the style of lighting requested and the construction needed to complete the project. Additional charges for items such as transformers, additional poles, boring and overhead and underground line construction will be based upon MVEC's Schedule of Charges. MVEC offers several street light styles.

Cobra

The Cobra fixture is mounted on a wood pole using either a six or 12 foot gray tubular standard extension mount. The matching gray cobra fixture features a 150 or 250 watt high-pressure sodium lamp.

Shoebox

The Shoebox style street light is typically used at major intersections or roadways. The fixture, with light control module, mounted on a direct buried fiberglass pole, is mounted 25 or 30 feet above grade utilizing a 4 foot tubular mast arm. Light is directed downward in a circular spread pattern. This light is available with either a 150 or 250 watt, high-pressure sodium lamp. All components are color matched dark brown.

Decorative Colonial

The Decorative Colonial style street light is typically used in residential neighborhoods. The fixture, with light control module, is mounted on a direct buried black fiberglass pole. The lamp is approximately 15 feet above grade. Panels direct light onto the street and away from homes. The light is available with a 150 watt high-pressure sodium lamp.

King Traditional

The King Traditional style street light is typically used in residential neighborhoods. The fixture, with light control module, is mounted on a direct buried black aluminum pole. The lamp is approximately 16 feet above grade. The light is available with a 150 watt high-pressure sodium lamp.

Lantern

The Lantern style street light is typically used in higher-end residential neighborhoods. This light style offers a decorative clear glass hurricane style shade inside. The fixture gives it an old-style look. The lamp is approximately 14 feet above grade mounted on a black fluted screw anchor based fiber-glass pole. The light is available with a 100 watt high-pressure sodium lamp.

Acorn

The Acorn style street light is typically used in higher-end residential neighborhoods. This light style offers an opaque acorn globe with bronze ring and finial. The fixture is mounted approximately 14 feet above grade on a black fluted fiberglass screw anchor based pole. The light is available with a 150 watt high-pressure sodium lamp.
