

The best of both worlds

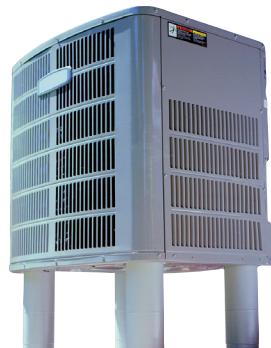

An Air Source Heat Pump is an efficient central air conditioner during the warmer months . . .

. . . and also provides the least expensive supplemental heating you can buy in the spring and fall.

You want the latest technology for your TV,
so why wouldn't you want the latest
technology for your air conditioning?
You want an Air Source Heat Pump.

Cools your home in the
summer and heats it so
inexpensively in the spring and
fall that it will pay for itself.

Half-price Energy Wise[®] rates and a
\$500 MVEC rebate available
Financing options available, too!
