

Three Steps to Join MVEC's EV24 Program

- 1. Start with having the contractor of your choice complete onsite work.**
This may include adding a circuit breaker to the Breaker Panel, running wire, installing a charger or outlet, and line metering through the EV24 off-peak meter housing (shown in yellow), free from MVEC if you need one. A Meter socket must be installed outside - four to six feet above ground level.
- 2. When onsite work is complete and the EV is in your possession, call MVEC dispatch at 952-492-8255 to schedule an EV24 meter installation.**
Note: this is free of charge to our members. Your EV24 rates will not apply until this step has taken place. *If the above steps or required work have not been fully completed as specified in the manner above, you will be assessed a trip charge to compensate for the time taken by our meter technicians.*
- 3. MVEC will install the EV24 meter and add it to your account.**
Your EV is now actively on the EV24 rate plan, and you are eligible for a \$150 rebate. Find the form here: <https://gre.eecp.app/OnlineApp/#enrollment/?programId=1&serviceProviderCode=20>
